

HOW ARE YOU MANAGING INSIDER THREAT RISK?

GPSG'S INSIDER THREAT PROGRAM FRAMEWORK

Insider threats can be malicious or unintentional. However, the resulting harm to your company from an insider incident will be the same.

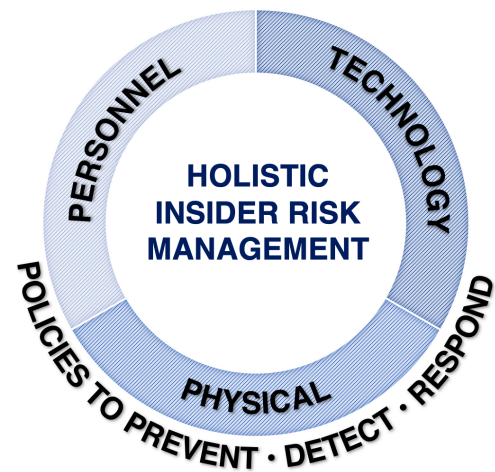

GPSG's Insider Threat Program Framework helps organizations develop a strategy for managing insider threats based on their critical assets and organizational risk priorities.

The framework leverages the National Institute of Standards and Technology and Common Criteria. A global team of GPSG cybersecurity, counterintelligence, and enterprise risk management professionals developed it.

Address top industry insider risk concerns:

- Intellectual property theft
- Sabotage of operations
- Physical violence

The framework assumes that insider threat controls are not mutually exclusive and go beyond technical solutions.

This approach identifies existing resources, establishes a tailored risk control baseline, and flags any asset control coverage gaps. The goal is to improve abilities to prevent, detect, and respond to an insider incident.
